

Friction

For smooth surface
friction force is
zero.

A, condition
of impending
motion.

$F \propto P$ upto limit F_{max}

As the motion starts, there is
slight reduction in friction force

F_{max} to F_k

$F_k \rightarrow$ kinetic friction.

Laws of Dry Friction or Coulomb

Friction

Coulomb Friction

$$F_s \propto N$$

$$F_k \propto N$$

$$F_s = \mu_s N \quad \& \quad F_k = \mu_k N$$

$\mu_s \rightarrow$ coefficient of static friction

$\mu_k \rightarrow$ Coefficient of kinetic friction.

μ_k is 20-25% less than μ_s

Angle of Friction

$$\tan \phi = \frac{F}{R}$$

$$= \frac{\mu R}{R}$$

$$= \mu$$

$$F = P \cos \theta$$

$$\mu R = P \cos \theta$$

$$R + P \sin \theta = W$$

$$R = W - P \sin \theta$$

If $W, P, \& \theta$ known
 R can be find out.
 μ " " " "

Cone of Friction

ϕ is Angle of friction.

Angle of Repose

$$W \sin \theta = F$$

$$W \cos \theta = R.$$

$$\tan \theta = \frac{F}{R} = \frac{\mu R}{R} = \mu$$

$$= \tan \phi$$

$$\theta = \phi.$$

Example

(a)

Resolving the
forces along the
plane & \perp to
plane

$$W \sin \alpha + \mu R = P \cos \alpha \quad (i)$$

$$W \cos \alpha + P \sin \alpha = R \quad (ii)$$

Substituting
value of
R in (i)

FBD.

$$W \sin \alpha + \mu (W \cos \alpha + P \sin \alpha) = P \cos \alpha$$

$$P (\cos \alpha - \mu \sin \alpha) = W (\sin \alpha + \mu \cos \alpha)$$

$$P = W \left(\frac{\sin \alpha + \tan \phi \cos \alpha}{\cos \alpha - \tan \phi \sin \alpha} \right)$$

$$\boxed{P = W \tan(\alpha + \phi)}$$

(b) Going down

$$\boxed{P = W \tan(\alpha - \phi)}$$

(i) Block on inclined plane

(5)

(ii) Ladder

(iii) Wedges.

Example

Let x be
distance
climbed by
man when
slipping start,

② ⇒

$$\sum F_y = 0$$

$$R_A + \mu R_B = 250 + 800 \quad \text{--- (1)}$$

$$\sum F_x = 0$$

$$R_B - \mu R_A = 0$$

$$R_B = 0.2 R_A \quad \text{--- (2)}$$

$$\text{(1) and (2) gives } R_A = 1009.6 \text{ N } R_B = 201.9 \text{ N}$$

$$AD = 2.5 \cos 60^\circ = 1.25$$

$$AH = x \cos 60^\circ = x/2$$

$\sum M_z = 0$ taking moment about A

$$800 \times AH + 250 \times AD = R_B \cdot BC + F_B \times AC$$

$$BC = AB \cos 30^\circ = 4.33 \quad AC = 2.5$$

$$\boxed{x = 1.657}$$

(6)

Wedge :- Wedge is useful m/c for small adjustment in position of body.

From FBD (1)

$$\sum F_y = 0$$

$$W = N_2 - \mu_1 N_1 \quad \text{--- (1)}$$

$$\sum F_x = 0$$

$$\mu_2 N_2 = N_1 \quad \text{--- (2)}$$

From (1) & (2)

$$N_2 = \frac{W}{1 - \mu_1 \mu_2}$$

$$N_1 = \frac{\mu_2 W}{1 - \mu_1 \mu_2}$$

From FBD (2)

$$\sum F_y = 0$$

$$N_2 = N_3 \cos \alpha - \mu_3 N_3 \sin \alpha \quad \text{--- (3)}$$

$$P = \mu_2 N_2 + \mu_3 N_3 \cos \alpha + N_3 \sin \alpha \quad \text{--- (4)}$$

α is known

N_3 & P can be calculated.

FBD (1)

FBD (2)

6.10 Belt & Rope Drive

Power transmission depends upon the frictional resistance between belt & surface drum.
 for rough surface \rightarrow tension in belt vary throughout.
 Frictional resistance \rightarrow increases exponential manner.

belt is in contact over angle θ .
 (Angle of lap)
 $T_1 > T_2$

For Equilibrium $\sum F_x = 0$

$$(T+dT) \cos \frac{d\alpha}{2} - T \cos \frac{d\alpha}{2} - dF = 0$$

$$d\alpha \rightarrow 0 \quad \cos \frac{d\alpha}{2} \rightarrow 1$$

$$\Rightarrow dF = dT$$

$$\mu dN = dT \quad \text{--- (1)}$$

$$\sum F_y = 0$$

$$(T+dT) \sin \frac{d\alpha}{2} + T \sin \frac{d\alpha}{2} - dN = 0$$

$$\sin \frac{d\alpha}{2} \approx \frac{d\alpha}{2}$$

$$\Rightarrow dN = 2T \frac{d\alpha}{2} + dT \frac{d\alpha}{2}$$

$$= T d\alpha \quad \text{--- (2)}$$

① & ②

$$\frac{dT}{T} = \mu d\alpha$$

$$\Rightarrow \int_{T_2}^{T_1} \frac{dT}{T} = \int_0^\theta \mu d\alpha$$

$$\log_e T_1 / T_2 = \mu \theta$$

$$\Rightarrow T_1 / T_2 = e^{\mu \theta}$$

θ must be in radians

new
angle

Types of Belts Drive (1) open belt (2) crossed belt

Torque
 $T = (T_1 - T_2) \cdot R$

re screw
 1/4 angle

$$\theta_1 = \pi + 2\alpha = \pi + 2 \sin^{-1} \frac{R_1 - R_2}{S}$$

$$\theta_2 = \pi - 2\alpha = \pi - 2 \sin^{-1} \frac{R_1 - R_2}{S}$$

Ex. A system of two blocks connected by a string which passes over pulley as shown in fig. $\mu = 0.3$ for block & pulley.

Determine min weight B. to keep the system in eqm.

Sol

$$T_2 = \mu N_A = 0.3 N_A$$

$$N_A = 60 \Rightarrow T_2 = 18 \text{ N}$$

$$\frac{T_1}{T_2} = e^{\mu\theta} \quad (\theta = 90^\circ)$$

$$= e^{0.3 \times 90 \times \pi/180} = 1.6$$

$$T_1 = 1.6 T_2 = 28.8$$

$$W_B = T_1 = 28.8 \text{ Ans}$$

Screw - Jack

d = mean diameter of the screw
 α = Angle of screw or helix angle
 ϕ = Angle of friction.

$$\tan \alpha = \frac{p}{\pi d}$$

$$P' = W \tan(\alpha + \phi) \quad \text{--- (1) } \uparrow$$

$$P = W \tan(\alpha - \phi) \quad \downarrow$$

$$P \times L = P' \times \frac{d}{2} = Q' \times \frac{d}{2} \quad \text{--- (2)}$$

$$P' = w \tan(\alpha + \phi)$$

$$P \times 2 = P' \times \frac{d}{2} = w \tan(\alpha + \phi) \times \frac{d}{2}$$

$$P_{\text{actual}} = \frac{d}{2L} w \tan(\alpha + \phi)$$

$$\text{or } \frac{d}{2L} w \tan(\alpha - \phi)$$

$$P_{\text{ideal}} = \frac{d}{2L} w \tan \alpha$$

P.T.O

8.32

The efficiency of a screw-jack is 55%, when a load of 1500 N is lifted by an effort applied at the end of a handle of length 50 cm. Determine the effort applied if the pitch of the screw thread is 1 cm.

$$\text{Ans } \eta = \frac{55}{100} = 0.55$$

$$\begin{aligned} V.R. &= \frac{2\pi \times 0.5}{0.01} \\ &= 314.16 \end{aligned}$$

$$M.A. = \frac{W}{P} = \frac{1500}{P}$$

$$\eta = \frac{M.A.}{V.R.} = \frac{1500/P}{314.16} \Rightarrow P = 4.68 \text{ N.}$$

6.3 [Oct] Two blocks A and B of mass 60 kg and 90 kg respectively are placed on horizontal plane. Both are connected to string as shown in fig. The coefficient of friction for all contacting plane is 0.3. Determine the value of the largest force P that can be applied without moving the blocks A & B.

Soln Block A.

$$N_1 = W_A = 60 \times 9.81 = 588.6$$

$$T = F_1 = 0.3 N_1 = 176.6 \text{ N}$$

Block B.

$$N_1 + W_B = N_2$$

$$588.6 + 90 \times 9.81 = N_2$$

$$N_2 = 1471.5 \text{ N}$$

$$F_2 = 0.3 N_2 = 441.45 \text{ N}$$

$$2T = 2 \times 176.6 = 353.2 \text{ N}$$

$$\sum F_x = 0$$

$$P = F_1 + F_2 + 2T$$

$$= 176.6 + 441.45 + 353.2$$

$$= 971.25 \text{ N}$$

$$\approx 970$$

[P6.14]
VCS.

(B)

What is the least value P required to cause the motion impend in the arrangement shown below. Assume the coefficient of friction on all contact surface as 0.2 weight of block A and B are 840 N and 560 N respectively

Soln Block B FBD

$$T + \mu N_1 = P \cos \theta \quad (1)$$

$$N_1 = 560 - P \sin \theta \quad (2)$$

$$\Rightarrow T + \mu(560 - P \sin \theta) = P \cos \theta \quad (3)$$

Block A

$$N_2 = 840 \cos 60^\circ = 420 \text{ N} \Rightarrow \mu N_2 = 84$$

$$840 \sin 60^\circ + \mu N_2 = T \quad (4)$$

Put the value of T in (4) from (3)

Fr (3) \Rightarrow

$$T + 112 - 0.2 P \sin \theta = P \cos \theta$$

$$\Rightarrow 840 \sin 60^\circ + 84 + 112 - 0.2 P \sin \theta = P \cos \theta$$

$$\Rightarrow P [\cos \theta + 0.2 \sin \theta] = 923.44$$

$$\Rightarrow P \left[\cos \theta + \frac{\sin \theta}{\tan \phi} \right] = 923.44$$

$$P = \frac{923.44 \tan \phi}{\cos(\theta - \phi)}$$

P will be min when $\cos(\theta - \phi) = 1$

$$\Rightarrow \cos(\theta - \phi) = 1 = \cos 0^\circ$$

$$\theta - \phi = 0$$

$$\Rightarrow \theta = \phi$$

$$\phi = 11.31^\circ$$

$$P_{\text{min}} = 923.44 \times 0.98 = 905.5 \text{ N}$$

Now $0.2 = \tan \phi$

8.2/BEER

A support block is acted upon by two forces as shown. Knowing that the coefficient of friction between the block and inclined plane are $\mu_s = 0.35$ and $\mu_k = 0.25$ determine the force P required (a) to start the block moving up the incline. (b) to keep it moving up (c) to prevent it from sliding down.

Solution:

(a)

$$P = (800 \text{ N}) \tan 44.29$$

$$= 780 \text{ N} \quad \leftarrow$$

(b)

$$P = 800 \tan 39.04$$

$$= 649 \text{ N}$$

(c)

$$P = 800 \tan 57.1$$

$$= 800 \text{ N}$$
